

Eternity Products

Brand, Product & Launch Strategy for Nepal

Cosmetics, professional styling tools and salon equipment

Built August 2026 · Kathmandu, Nepal

1. Executive summary

Eternity Products sells Ikonic professional styling tools, cosmetics and salon equipment in Nepal through TikTok and Facebook, supplying both retail buyers and an existing base of beauty parlours. The goods are imported directly from India.

Research for this document pulled the complete Ikonic India catalogue (320 SKUs with list and MRP pricing) and every Ikonic listing on Daraz Nepal, then matched them against each other. That comparison produced one finding that should reshape how the business allocates its time.

The business has two product lines with completely different economics, and they are currently being treated as one.

	Traffic line	Profit line
What	Straighteners, dryers, curlers, stylers	Barber chairs, shampoo stations, spa beds, trolleys, steamers
Daraz Nepal presence	Heavy. Every price visible	None. Searches return office chairs and consumer gadgets
Margin	25–30%	~50%
Profit per unit	NPR ~2,900	NPR ~94,000
Who buys	Retail consumers	Salon owners
What it is for	Audience, trust, cash flow	Actual profit

A single six-chair salon fit-out produces roughly **NPR 563,000** of gross profit. Matching that on straighteners takes **193 units sold**.

Both lines come from the same supplier. Ikonic manufactures the barber chairs, shampoo stations and spa beds as well as the straighteners — one distributor relationship already covers the entire opportunity.

The strategic conclusion: the styling tools are not the business. They are the marketing channel for the business. They build the audience, prove authenticity, and generate the salon relationships. The salon equipment is where the money is, and it faces no marketplace price competition in Nepal at all.

2. The company

What Eternity Products is

An importer and distributor of professional hair styling tools, cosmetics and salon equipment, operating in Nepal and sourcing directly from India.

The business runs on two engines at once. It sells styling tools to consumers through social commerce, and it supplies beauty parlours directly with tools, consumables and salon furniture. Most competitors do one or the other. Doing both is the structural advantage: the consumer side builds the audience and the brand, and the trade side converts that standing into high-value equipment orders.

Where it operates today

Sourcing	Direct import from India. Ikonic is the anchor brand, plus Silk Hair and Qween
Retail channels	TikTok @eternity.products , Facebook. Order taken by DM, fulfilled cash on delivery
Trade channel	Direct supply to beauty parlours, relationship-led, no formal portal yet
Product range	Straighteners, dryers, curlers, crimpers, stylers, professional scissors, salon chairs, manicure and pedicure stations, a 7-in-1 hydrafacial machine
Market	Kathmandu valley core, with delivery beyond it

What the business already owns

These are assets, and they are worth naming because the strategy depends on them.

A distributor relationship covering the entire opportunity. Ikonic manufactures both the styling tools and the salon furniture. One supplier agreement reaches from a NPR 1,554 blow-dry brush to a NPR 200,000 pedicure station. Most distributors have to assemble that range from several suppliers.

An installed base of parlour customers. Salons already buying regularly. This is recurring revenue with the relationship already made — the hardest and slowest part of B2B, already done.

Direct import capability. Buying at India distributor prices rather than through a local wholesaler is what creates the margin corridor in section 3. It also means the price is set, not accepted.

A social audience being built on owned channels. TikTok and Facebook presence under a consistent brand name.

Category knowledge. Knowing which products salons actually reach for, and why, is not something a competitor can order from a catalogue.

What the business is building toward

1. **An own website** — to stop renting the customer relationship from a marketplace, and to price B2B privately
2. **An own brand** — Eternity-labelled products alongside the distributed lines
3. **A warehouse and distribution operation** — supplying other retailers, not only end customers

That third goal is the real destination. The first two are how it gets funded and de-risked.

Where the business sits in the chain

The long-term position is one step further left: becoming the layer other Nepali retailers buy from, rather than only selling through.

Company facts still to confirm

This section deliberately stops where verified knowledge stops. The following are needed before this document goes to a bank, a supplier or a partner, and none of them have been assumed:

Item	Why it is needed
Registered legal entity and trade licence	Required on any formal supplier or credit agreement
PAN / VAT registration status	Determines whether import VAT is a recoverable pass-through or a permanent 13% cost
Year established and trading history	Suppliers and banks both ask; it supports credit terms
Team size and roles	Determines which content tier and which build phase is realistic
Number of active salon accounts	The single most important number in the business, currently uncounted
Physical premises: shop, storage or both	Determines whether multi-warehouse stock is needed at phase 4 or phase 8
Current monthly revenue split, D2C vs B2B	Establishes the baseline every target in this document should be measured against
Ikonic distributor agreement terms	Territory, exclusivity, minimum order, payment terms

3. What the research actually found

Every claim below was verified against a live page. Anything that could not be verified is listed separately in section 16 rather than quietly smoothed over.

2.1 The Ikonic India catalogue is deep, and it includes furniture

Pulled from the official Ikonic India product feed: **320 SKUs**, each with a list price and an MRP.

Category	India list price range (INR)
Pedicure stations	up to 200,000
Electric spa / facial beds	116,000 – 188,000
Barber chairs	79,600 – 84,000
Shampoo stations	54,400 – 64,000
Cutting / reclining chairs	26,800 – 40,000
Trolleys, stools, steamers, sterilizers	4,800 – 14,800
Straighteners	1,203 – 6,300
Hair dryers	1,333 – 8,438
Curlers, crimpers, stylers	2,135 – 5,250
Professional scissors	1,155 – 5,785

The furniture range is the part of this catalogue that is not being exploited.

2.2 Nepal street prices run 17–53% above India list

Nineteen SKUs matched confidently between the India catalogue and live Daraz Nepal listings. Converting at the NPR/INR peg of 1.60:

Product	India list	At peg	Daraz Nepal	Premium
Pro Titanium Shine 3.0	INR 6,300	NPR 10,080	NPR 12,920	+28%
Gleam 3.0	INR 5,950	NPR 9,520	NPR 12,580	+32%
Pro Straight Black	INR 4,550	NPR 7,280	NPR 9,760	+34%
S3+	INR 3,675	NPR 5,880	NPR 7,690	+31%
Pro 2200 Hair Dryer	INR 3,055	NPR 4,888	NPR 7,500	+53%
Curling Tong	INR 2,400	NPR 3,840	NPR 6,600	+72%

That spread is the import corridor. It has to absorb freight, customs duty, VAT, clearing and inland transport — and what remains is margin.

2.3 Professional salon equipment is effectively absent from Daraz Nepal

Searches for `barber chair salon hydraulic`, `parlour chair beauty salon`, `pedicure chair`, and `hydra facial machine professional` returned:

- office and gaming chairs
- a single NPR 455,000 massage chair
- stainless steel footrests at NPR 11,985
- consumer-grade facial gadgets under NPR 2,000

No professional barber chairs. No shampoo stations. No professional hydrafacial machines.

For a category with no marketplace listings, there is no price anchor, no race to the bottom, and no competitor a customer can screenshot. Eternity sets the price.

2.4 The verified consumer price list

These match the figures already in hand and confirm the current pricing is accurate:

Product	Daraz Nepal
IC Pro Titanium Shine 3.0	NPR 14,200
Pro Titanium Pro 3.0	NPR 14,100
Gleam 3.0 (black, super slim)	NPR 13,700
Pro Titanium Shine 3.0	NPR 12,950
Gleam 3.0 (rose gold, titanium)	NPR 12,920
Gleam 3.0 (1 inch slim floating)	NPR 12,580
Hair Dryer Pro 2500+	NPR 11,300
HD Pro 2500+ (black)	NPR 10,360
Pro Straight	NPR 10,400
S3+ Ceramic	NPR 7,690
Pro 2200 dryer	NPR 7,600
Curling tongs CT-16 to CT-28	NPR 5,920 – 6,600
Glam straightener	NPR 5,698
3-in-1 Express Styler 1200W	NPR 5,016 – 5,488
Travel Express dryer 1400W	NPR 2,729
Blow dry brushes (Chameleon)	NPR 1,554 – 2,050

4. Ideal customer profile

Four segments matter, and they are not equally valuable. They are ranked here by gross profit per relationship, not by headcount — because the largest segment by volume is the least valuable per customer, and treating them as equally important is how selling time gets misallocated.

ICP 1 — The established salon owner (primary, highest value)

This is the profile the business should be built around.

Who	Owns a running parlour or salon, 3–8 chairs, 2+ years trading
Where	Kathmandu valley first: Baneshwor, Chabahil, Kalanki, Lalitpur, Bhaktapur. Then Pokhara, Butwal, Chitwan, Biratnagar
Buys	Tools in bulk, consumables monthly, furniture and equipment in single high-value units
Order value	NPR 6,000 monthly consumables → NPR 195,000 single chair → NPR 500,000+ full fit-out
Gross profit	~50% on equipment. One fit-out ≈ NPR 563,000
Decision maker	The owner, personally. Never a purchasing department
Buying trigger	Adding a chair, moving premises, a competitor upgrading nearby, festival/wedding season revenue arriving
Buying process	Relationship first, then trial, then a site visit. Equipment never closes over the phone
Where they are	Facebook groups, Viber, and physically in their shop. Not on LinkedIn
Primary objection	" <i>Yeti mahango chair kina?</i> " — they buy assets, so price alone is meaningless
What converts	Payback arithmetic: chair cost against monthly chair revenue. And a supplier who answers the phone
Sell first	A consumable or a single tool. Small, effortless, low risk. The equipment conversation comes at order three or four

Why this ICP wins: they buy repeatedly, they buy the high-margin line, they refer other salons, and they are almost impossible for a marketplace to serve. The relationship is the moat.

ICP 2 — The new salon opening (*highest value per event, hardest to time*)

Who	Opening a first or second location, often a stylist going independent
When	Concentrated around Baisakh (Nepali new year, April) and after festival season
Buys	Everything at once — chairs, shampoo station, trolleys, steamer, mirrors, full tool kit
Order value	NPR 400,000 – 1,200,000 in a single engagement
Buying trigger	Lease signed. From that moment there is a fixed deadline
Decision driver	Certainty and speed. They are terrified of opening late
Primary objection	" <i>Can they actually deliver a full setup on time?</i> "
What converts	A completed fit-out case study with photos, plus a written delivery and installation schedule
Sell first	The site visit and the measured plan. Free, and it makes you the default supplier
How to find them	New salon registrations, stylists announcing independence on social, landlords and interior contractors, and your existing salon network (they always know first)

Why this ICP is worth a dedicated motion: a single event produces more gross profit than a year of retail. The difficulty is purely timing, which is why the existing salon community is the best early-warning system available.

ICP 3 — The professional stylist (*bridge segment*)

Who	Working stylist, employed at a salon, buys their own kit
Age	20–35
Buys	Scissors (INR 1,155–5,785 India list), their own straightener or dryer, blow-dry brushes
Order value	NPR 3,000 – 15,000, several times a year
Buying trigger	Starting a job, a scissor going blunt, learning a new technique
Decision driver	Craft credibility. They want what good stylists use
Primary objection	<i>"Is this actually professional grade or just marketed that way?"</i>
What converts	Letting them hold it. Stylists buy on feel, and a scissor cannot be sold from a photo
Channel	In-salon visits, TikTok technique content, free training sessions

Why this segment matters more than its revenue: stylists become salon owners. A stylist who trusts you at 24 is a fit-out customer at 30. They also influence what their current employer buys.

ICP 4 — The retail consumer (*volume, thin margin, real strategic purpose*)

Who	Women 18–35, urban and semi-urban, styling at home
Where	TikTok and Facebook. Discovery is almost entirely social
Buys	One tool, occasionally a bundle. Straighteners, dryers, multi-stylers
Order value	NPR 2,700 – 14,200. Typically one purchase, sometimes a second as a gift
Gross profit	~NPR 2,900 per unit at 25–30%
Buying trigger	A wedding, Teej, Dashain, a bad experience with a cheap tool, a reel
Payment	Cash on delivery, overwhelmingly
Primary objection	<i>"Original ho ki copy?"</i> — the single biggest blocker in this segment
Secondary objections	Heat damage fear, Daraz price comparison, delivery reliability outside the valley
What converts	Authenticity proof on camera, open-box-on-delivery, and a matched price with better service

Their strategic purpose is not the margin. This segment builds the audience, generates the content proof, funds cash flow, and — critically — makes salon owners aware of the brand before any sales call happens. A salon owner who has seen your videos for three months is a warm conversation.

Segment priority

Rank	Segment	GP per relationship	Effort	Verdict
1	Established salon owner	Very high, recurring	Medium	Build the business here
2	New salon opening	Highest per event	High, timing-dependent	Dedicated motion, early-warning network
3	Professional stylist	Low now, high later	Low	Invest for the long game
4	Retail consumer	Low, one-off	Low per sale, high in aggregate	The marketing channel, not the destination

Who to say no to

Naming the anti-customer is as useful as naming the customer, because these consume the same selling time and return far less.

The price-only shopper. Opens with "last price kati?" before asking a single question about the product. They will leave for a NPR 200 difference and they generate the most support load. Match your published price and move on.

Low-value orders far outside the valley. A NPR 1,500 brush shipped to a remote district costs more in delivery, refusal risk and support than it earns. Set a minimum order value for outside-valley delivery, or bundle it.

Anyone asking you to quote a chair over the phone. Not because they are bad customers, but because that conversation cannot be won on a photo and a number. Convert it into a site visit or decline it.

Resellers wanting distributor pricing without volume. They compress your margin and then compete against you on your own products. Tier pricing exists so this is answered by policy, not by negotiation.

What this means for where time goes

The 193-to-1 ratio from section 1 is the whole argument. One afternoon spent visiting three salons has a higher expected value than a week of retail order handling.

The retail line should be increasingly automated — website, content calendar, COD confirmation queue — precisely so that owner time can be spent on ICP 1 and ICP 2, which cannot be automated and where the margin actually is.

5. Brand positioning

The problem Eternity solves

The Nepali beauty market has a trust problem, not a supply problem. Styling tools are widely available and cheap counterfeits are everywhere. The most common question a buyer asks is not "how much?" — it is "**original ho?**"

Salon owners have a different problem. They can buy tools locally but cannot easily buy professional equipment at all, and when they can, nobody explains whether it will pay for itself.

Positioning statement

For Nepali women who style at home and for salon owners building a business, Eternity Products is the supplier that proves what it sells is genuine and shows exactly what it will earn — because we import it ourselves and we stand behind it here, in Nepal.

The three brand pillars

Proven genuine. Serial numbers, warranty cards, unboxing on camera. Authenticity is treated as a product feature, not a defensive answer.

Local accountability. Warranty honoured here, service here, a real person who answers. This is precisely what a marketplace seller cannot offer.

Trade expertise. Not a shop that happens to sell hair tools — the supplier the salon trade relies on, that also sells to consumers.

What Eternity is not

Not the cheapest. Competing on price against Daraz means competing against sellers with no warranty obligation and no service cost. That is a race with no winner.

6. Pricing strategy

The rule: match the anchor, win on everything else

For any product with a visible Daraz listing, price **at or within a few percent of** the Daraz price. Do not undercut. Undercutting starts a price war on a product where the margin is only 25–30%, and it signals that the product might not be genuine.

Win instead on:

- warranty honoured locally
- authenticity verification
- open-box-on-delivery
- service and advice after the sale
- delivery certainty

For products with no Daraz listing

This is the salon equipment, and roughly two thirds of the catalogue. Price from landed cost plus target margin. There is no anchor to fight, so the constraint is what the customer can justify, not what a competitor charges.

For equipment, the justification is always **payback period**:

"This chair costs X. Four customers a day earns Y a month. It pays for itself in Z months, then it is profit."

A salon owner who has done that arithmetic is no longer comparing prices.

Never discount price on the profit line

Discount delivery, installation, a free trolley, an extra year of service. Never the chair. A price discount teaches the customer to negotiate on every future order and permanently resets the anchor.

7. Import economics

Goods come from India, which brings the SAFTA preference and the currency peg into play.

The build-up

```
India invoice (INR)
  × 1.60                      NPR/INR peg
= CIF value in NPR
+ customs duty                0-80% ad valorem, per HS line
= duty-paid value
+ VAT 13%                     on (CIF + duty) – recoverable if VAT registered
+ clearing agent + docs
+ inland freight to warehouse
= TRUE LANDED COST
```

Three levers that materially change the number

1. VAT registration. VAT is charged on CIF plus duty. Registered, it is a recoverable pass-through. Unregistered, it is 13% of landed value gone permanently. On a NPR 100,000 chair that is roughly NPR 13,000 per unit. This is the single largest margin lever available and it is an administrative task, not a commercial negotiation.

2. The SAFTA certificate of origin. India-origin goods qualify for a duty reduction of roughly 5% where the base rate is 30% or under, and 7% above that — but only with a valid certificate of origin from the supplier. Make it a standing condition on every purchase order, not a per-shipment request.

3. The distributor discount. The India *list* price is not the buy price. Working backwards from a 25–30% margin on verified Daraz prices, the implied distributor discount is around **25% off list on tools**. Furniture normally carries a deeper discount; the workbook shows that hitting 50% on a barber chair at NPR 195,000 requires about a 47% discount off list. Confirming real terms against these figures is worth doing before the next order.

Worked example — Ikonic Gleam 3.0

	NPR
Selling price (matches Daraz)	12,920
Landed cost	9,424
Packaging	120
Delivery, inside valley	150
Cost of COD refusals, spread	41
COD collection fee	258
Net profit per delivered unit	2,927
Gross margin	27.1%

Sold through Daraz instead, commission and payout fees cut net profit to NPR 2,359. **Owning the checkout is worth NPR 568 per unit** — meaningful at volume, and the entire financial case for building the website.

Worked example — Ikonic Barber Chair Felix

	NPR
Selling price	195,000
Landed cost	97,574
Delivery and installation	3,500
Net profit per chair	93,926
Net margin	48.2%
Profit on a six-chair fit-out	563,556
Straighteners needed to match it	193

8. Channel strategy

Where each channel belongs

TikTok is the discovery engine. TikTok Shop and creator monetisation are not available in Nepal, so it cannot close a sale — it must hand off to DM or the website. That is a constraint to design around, not a reason to use it less.

Facebook carries the older salon-owner demographic and is where parlour communities actually talk. Facebook groups matter more here than the page.

Daraz is a discovery channel for price-transparent tools, and a competitor everywhere else. Use it to be found; migrate repeat buyers to owned channels. Never list the salon equipment there — it would create the price anchor that currently does not exist.

The website is where margin is protected, B2B pricing can be tiered privately, and inventory connects to the warehouse.

Viber is the retention engine. Nepal runs on Viber, and a broadcast list is owned audience that no algorithm can throttle.

Payment reality

Method	Status
Cash on delivery	Works. The default. Budget the refusal rate honestly
eSewa, Khalti, Fonepay	Work. Merchant onboarding needs PAN
Bank transfer	Works. Standard for salon fit-outs
Stripe, PayPal	Cannot receive in Nepal. Do not design around them

9. Marketing psychology for this market

Generic persuasion tactics are not what moves a Nepali buyer. These are the specific hesitations, and the responses that address them.

Authenticity anxiety — the biggest single blocker

They think: "Original ho ki copy?"

Counterfeit styling tools are everywhere, and most buyers have been burned or know someone who was.

The move: make verification a feature. Serial number, warranty card and box seal on camera in every listing and every proof video.

"Serial number cha, warranty card cha, box seal cha. Video ma sabai dekhaeko cha — check garera matra kinnus."

The COD trust gap

They think: "Paisa dida saman thik nabhayo?"

The move: open-box-on-delivery. It converts hesitation into orders and cuts refusal rates.

"Rider agadi box kholnus. Thik chaina bhane nalinus — paisa tirnu pardaina."

Price anchoring against Daraz

They think: "Daraz ma sasto cha ni"

The move: match the price, then move the comparison to ground where a marketplace seller cannot follow.

"Price ustai ho. Farak: warranty hami afai dinchhau, servicing local cha, ra original guarantee."

Salon owner ROI doubt

They think: "Yeti mahango chair kina?"

Salon owners buy assets. A price with no earning figure beside it is meaningless to them.

"Chair ko price X. Din ko 4 customer ma mahina Y kamai. Z mahina ma paisa uthchha — tyaspachi profit."

Fear of heat damage

They think: "Kapal bigrincha ki"

Genuine and widespread. Education converts better than any discount in this category.

"Patlo kapal 160–180, normal 180–200, bakhriko 200–230. Yo tool ma control cha — tyahi ho farak."

The festival cash cycle

Household spending concentrates around Dashain and Tihar bonuses. Take a small deposit before the peak and deliver during it.

"Ahile NPR 1,000 booking, Dashain ma delivery. Price aajai ko lock huncha."

10. The content system

The principle

Consistency beats production value. Four adequate posts a week beat one polished post a month, and the calendar has to survive a bad week.

Three capacity tiers

The 90-day calendar is written with every row tagged Solo, Plus1 or Team. Filter to current capacity and do only those rows. Nothing needs rewriting when capacity changes.

- **Solo** — 3–4 posts/week, phone only, one batch-shoot day
- **Plus1** — daily posting with one helper
- **Team** — daily plus paid amplification and UGC

The batch-shoot system

One fixed day each week. Same light, same background, same table. Six to eight clips in 60–90 minutes, one take each. Captions written in bulk from the hooks sheet, then scheduled.

The fixed day matters more than which day. Perfectionism is why content calendars die in week three.

Content pillars

Pillar	Purpose
Proof	Kills authenticity anxiety. The single most important pillar
Transformation	Before/after. Demonstrable, not claimed
Education	Builds authority and earns saves
Social proof	Named local salons and customers. Anonymous reads as fake here
Offer	Real deadlines, real stock counts. Never fake scarcity
Behind the brand	Stock arriving, packing, delivery runs. Proof of a real trade
B2B	Fit-out reveals with payback maths on screen
Comparison	Cheap copy versus the real tool. Loss aversion
Community	UGC reposts under a campaign hashtag

Festival anchoring

Beauty and salon demand in Nepal is seasonal and the seasons are predictable. Dashain is the single largest window and needs stock ordered roughly six weeks ahead. Wedding season is when salons have cash and urgency — that is the B2B window.

Festival dates follow the Bikram Sambat lunar calendar and shift annually. Confirm against the patro before committing spend.

11. The salon community engine

This is the most valuable and most underexploited asset in the business.

There is already a base of parlours buying regularly. That is not a lead list — it is recurring revenue with a relationship already established. Most of it currently lives in a phone and in memory.

What it becomes

A registered community with:

- an account record per salon: contact, area, chair count, purchase history, tier
- tier pricing that rewards volume without ad-hoc negotiation
- first access to new stock, as the concrete benefit of membership
- broadcast for the group, personal nudges for individuals
- quarterly free training

The broadcast discipline

A broadcast is for the group. A reorder nudge is for one named person. Mixing them is how a valuable list becomes a muted one.

Four useful messages for every one that sells. The list stops working the moment it becomes a sales channel only.

Why training is the moat

A salon that gets free technique training, first access to stock and someone who answers the phone does not switch supplier over a 5% price difference. Equipment and consumables are commodities; the relationship is not.

The pipeline

Identified → Contacted → Sampled → First order → Repeat → Equipment → Fit-out partner → Advocate

The critical transition is **Repeat** → **Equipment**. That is where a NPR 6,000 customer becomes a NPR 200,000 customer, and it only happens through a site visit. Furniture never closes over the phone — quoting a chair price by text loses to a photo from a cheaper supplier every time.

12. Own brand roadmap

Phase	Window	Goal	Required first
Local authority	Month 1–6	Known across Kathmandu valley salons	30+ salon accounts, consistent content
National reach	Month 6–12	Known to the national salon trade	Reliable outside-valley delivery
Own label	Month 12–24	Eternity-branded line beside Ikonik	Proven demand, reliable supply
Regional	Month 24+	Export or franchise	Own brand with real traction at home

Own-brand products should start with **consumables, not equipment** — capes, towels, brushes, aprons, disposables. They reorder constantly, carry no warranty risk, need no service network, and every salon already buys them monthly.

13. The ecommerce and warehouse system

The full technical specification is in `ANTIGRAVITY_BUILD_PROMPT.md`. The commercial requirements it has to satisfy:

Storefront — catalogue and product pages built around authenticity proof, COD as a first-class payment method alongside eSewa and Khalti, delivery pricing that distinguishes inside from outside the valley, and Daraz price shown as an anchor where one exists.

Admin — a COD confirmation queue (the call before dispatch is what controls the refusal rate), stock across multiple locations, purchase orders and goods receipts, and margin reporting that is permission-gated so cost data does not leak to staff who negotiate.

B2B portal — salon accounts with tier pricing, quote requests, credit terms for qualifying accounts only, and reorder history.

Community module — broadcast to opted-in salons, new-arrival and restock announcements, and triggered reorder nudges.

Built in that order. Each phase ships something usable rather than waiting on the whole system.

14. The 90-day plan

Weeks 1–2 — cost nothing, de-risk everything

Confirm VAT registration status and register if needed. Load real supplier costs into the workbook. Load existing parlour accounts into the CRM sheet and collect Viber broadcast opt-in. First batch-shoot. Film the authenticity proof video.

Weeks 3–4 — set the commercial foundations

Set the price ladder against the verified Daraz anchors. Make the SAFTA certificate of origin a standing PO condition. Call the ten highest-value salon accounts and book three site visits.

Weeks 5–8 — build the owned channel

Ship the catalogue and product pages. Ship COD checkout and order tracking. Ship the admin order queue. Add eSewa and Khalti.

Weeks 9–13 — turn on the engine

Launch the salon community portal with tier pricing. Set reorder points on the top 20 SKUs. Start paid retargeting only after organic proves which hooks work. Stand up multi-location stock. Then recalculate every scenario with real data and replace the placeholders.

15. Risks

Risk	Why it matters	Response
COD refusal rate climbing	Directly destroys margin; invisible until measured	Confirmation call before every dispatch; open-box-on-delivery; track weekly
Counterfeit competition	Undercuts on price and poisons category trust	Authenticity proof as core content, not a disclaimer
Single-supplier dependence	Everything routes through one iconic relationship	Prove the model, then add a second line — consumables first
Currency or duty change	Landed cost moves under you	Unit Economics is formula-driven; update inputs and everything recalculates
Working capital in stock	Furniture is high value and slow moving	Order equipment against confirmed sales; stock only fast-moving tools
Key-person concentration	The salon relationships live with one person	Get the CRM out of the phone and into the system
Festival stockout	The largest revenue window, missed	Order six weeks ahead of Dashain

16. What was not verified

Listed plainly rather than papered over.

Silk Hair — no Nepal listing exists, and no Indian brand trades under exactly this name. Three Indian candidates were found and priced (see below); which one is yours needs one word from you.

Queen lipstick — no Daraz Nepal presence; searching "queen" returns unrelated Queen-branded watches and jewellery. Genuinely a whitespace category, but unpriceable without the supplier list.

Exact customs duty rates for the relevant HS lines. Rates are per line and change with the annual budget; a clearing agent must confirm. Left as an input cell rather than guessed.

Actual supplier cost. Every cost figure in the workbook is derived from stated margin bands, not from invoices. One column edit corrects the entire model.

Daraz commission rate for these specific categories — confirm in the seller dashboard.

Festival dates — approximate windows only. Confirm on the patro.

The two lines you can source from India today

You said you have the connection to bring these into Nepal. Both now have real India pricing rather than a blank.

7-in-1 hydrafacial machine — India market price found.

Indian trade listings price the 7-in-1 by build grade. This is a genuine range, not one quote:

Grade	India price (INR)	Landed Nepal estimate (NPR)
Entry / manual	8,000 – 11,000	~17,000 – 23,000
Semi-automatic, double motor	12,500 – 18,000	~26,000 – 38,000
Professional, fully automatic	22,000 – 30,000	~46,000 – 63,000

Landed estimates apply the 1.60 peg and the 1.32 landed multiplier. They assume no distributor discount, so real landed cost should come in lower.

This changes the picture on this product. At a professional-grade landed cost near NPR 50,000 and no comparable machine listed on Daraz Nepal, the pricing constraint is what a salon can justify, not what a rival charges. Sell it on payback: a salon charging NPR 2,500 a session and running two a week recovers a NPR 120,000 machine inside a year. Enter your real supplier quote in Scenario D of the workbook and the arithmetic completes itself.

"Silk Hair" — three Indian candidates, one is probably yours.

No Indian brand trades under exactly "Silk Hair". The three closest, all real and all importable:

Candidate	What it is	Price range	Fit
Silky India (silkyhairindia.com)	Salon-professional hair care: shampoos, masks, serums, ampule treatments in numbered ranges (.01–.07). 23 SKUs	INR 799 – 2,499	Strongest fit. Salon-professional structure, sold to trade, exactly the consumable line your parlour base reorders monthly
Silk Essence (thesilkesence.com)	Premium retail hair care — biotin, collagen, keratin	Retail positioning	Consumer brand, weaker trade fit
Silk Goddess (silkgoddess.in)	Professional-grade, sulphate-free, post-keratin safe	Not published	Possible, catalogue not public

Silky India is the one worth checking first, and not only because the name matches. Consumables are the missing piece of your model: your salon accounts currently reorder tools occasionally, but shampoos, masks and ampules reorder *monthly*. That converts an intermittent relationship into a predictable one, and it is the natural first product for your own label later.

Confirm which brand you actually hold and the rows fill in.
